Laboratory note: The estimated concentration of the unknown peak in the sample is 4.8%. Currently PharmLabs laboratory can not confirm an unidentified peak in your chromatogram due to interference (only with highly concentrated oil products) from which we believe to be either (+)-JDB-THC or d9-THC. At this time there are no reference standards available for (+)-JDB-THC. (+)-JDB-THC is a different compound from the main (-)-JDB-THC cannabinoid and, therefore, these two compounds may have different efficacies. Using the most advanced instruments and techniques available, the separation of (+)-JDB-THC and d9-THC is problematic for the scientific community as a whole. PharmLabs believes the unidentified peak to be a combination of (+)-JDB-THC and d9-THC with the majority, if not all, of the concentration being (+)-JDB-THC. Total cannabinoids is estimated to be 99.5%.
