Sample **Torch THC-0 - Strawberry Gelato**

Sample ID	SD220721-017 (49981)	Matrix	Concentrate (Inhalable Cannabis Good)
Tested for	Latro inc		
Sampled	-	Received	Jul 20, 2022
Analyses executed	QARUSH, CAN20	Reported	Jul 21, 2022

laboratory note: The estimated concentration of the sample within the can is 4.5%. Currently PharmLabs laboratory can not confirm an unidentified peak in your chromatogram due to interference (only with highly concentrated D8 products) from which we believe to be either γ -8-THC or δ -9-THC. At this time there are no reference standards available for γ -8-THC. γ -8-THC is a different compound from the main δ -8-THC cannabinoid and, therefore, these two compounds may have different efficacies. Using the most advanced instruments and techniques available, the separation of γ -8-THC and δ -9-THC is problematic for the scientific community as a whole. PharmLabs believes the unidentified peak to be a combination of γ -8-THC and δ -9-THC with the majority, if not all, of the concentration being γ -8-THC. Total cannabinoid is estimated to be 4.5%.
