Laboratory note: The estimated concentration of the unknown peak in the sample is 4.87% | Currently PharmLabs laboratory can not confirm an unidentified peak in your chromatogram due to interference (only with highly concentrated D8 products) from which we believe to be either (+)88-THC or d9-THC. At this time there are no reference standards available for (+)48-THC is a different compound from the main (-)48-THC cannobinion and, therefore, these two compounds may have different efficacies. Using the most advanced instruments and techniques available, the separation of (+)48-THC and 49-THC is a different efficacies. Using the most advanced instruments and techniques available, the separation of (+)48-THC and 9-THC is products) from the scientific community as a whole. PharmLabs believes the unidentified peak to be a combination of (+)48-THC with the majority, if not all, of the concentration being (+)48-THC. Total (+/-) D8 Concentration is estimated to be 61.35%
