Analyses executed	CAN20, RES, MIBIG,	MTO, PES, HME	, FVI					

Laboratory note: The estimated concentration of the unknown peak in the sample is 2.0% | Currently PharmLabs laboratory can not confirm an unidentified peak in your chromatogram due to interference (only with highly concentrated D8 products) from which we believe to be either (+)d8-THC or d9-THC. It it is time there are no reference standards available for (+)d8-THC. (+)d8-THC is a different compound from the main (-)d8-THC annablinoid and, therefore, these two compounds may have different efficacies. Using the most advanced instruments and techniques available, the separation of (+)d8-THC and d9-THC is problematic for the scientific community as a whole. PharmLabs believes the unidentified peak to be a combination of (+)d8-THC and d9-THC with the majority, if not all, of the concentration being (+)d8-THC. Total cannabinoids is estimated to be 72.1%
